

**SAINT JEANNE DE
LESTONNAC SCHOOL**

FIELD OF DREAMS

**2000 E. FIRST STREET
SANTA ANA, CA**

Riggins Construction & Management, Inc. contracted with Saint Jeanne de Lestonnac School to build dugouts and a restroom/storage structure at their synthetic turf sports field project, Field of Dreams.

All four of the dugouts and the restroom/storage facility received a Custom-Bilt, standing-seam metal roof in Regal Blue, a complementary color to the bright green synthetic turf. A glass block wall adds natural light to the north end of the storage room which houses specialized maintenance equipment for the field. As a finishing touch, all exposed roof-framing elements were painted to match.

The school colors were carried throughout the design of the restrooms which had french blue phenolic toilet partitions and ceramic tile floors and wainscoting. Electronic, sensor-controlled flush valves, stainless steel sinks, and water closets were installed as well as automatic hand dryers and motion-sensor controlled lighting. Just outside of the restrooms, a set of handicap-accessible drinking fountains are an oasis for thirsty athletes.

All structures, including the 16" grotto planter, free-standing masonry wall for privacy, and pilasters at the entry gate, were built with split-face CMU (Concrete Masonry Unit) technology, both durable and functional, with an attractive pattern. To protect the beauty of the masonry, each structure was finished with an anti-graffiti coating.

Riggins Construction & Management, Inc. was pleased to participate in this worthwhile project that is a functional, yet attractive, part of our community.
